Q What is BOM?

⇒ Browser stands for "Browser Object Model". It provides interaction with the browser.

Q What is the difference between undefined and null value?

⇒ Undefined :- not defined and has no keyword.

Null :- A value explicitly specified by keyword null.

Q What is the difference between == and === ?

⇒ == :- checks for equality only while. Operator does the type conversion of the operands before comparison.

=== :- The operator compares the value as well as the data types of the operands.
